Published: Tuesday November 17 2015 A screen adaptation of creepy children's books is a service tribute, but it dilutes the power of original fairy tales. Julie Beck August 23, 2019 George Krachyck ICBS Films/Everett Collection Scary Stories to Tell in New Film Adaptation of the collection of children's books of the same name, wants you to know what stories stories At both the beginning and the end of the film, the voiceover reminds the audience: Stories are up to and well, stories are healing. If we repeat them often enough, they will become real. They have that power. In the film, this power is magical, ominous and channelled through a physical book. Stories appear on the pages (written in blood, naturally) and then play in the real world. Our heroes - a group of rabble-raised high school students, and a mysterious stranger who passes through the city - are on a mission to stop the book before each one features in their own narrative, with possibly fatal results. This is a useful vanity, given that the source material is a compilation of very short, unrelated folk tales. However, while Scary Stories is an entertaining tribute to the original book, it can't help but dilute the power of the stories it tells. In my fourth grade, in 1998, if you haven't read Scary Stories to tell in the dark- volumes one, two and three- you should either fix it immediately or accept your friendliness. So I, a fraidy-cat in my heart but ever susceptible to peer pressure, put my name on a waiting list in the school library and ended up white knuckling my way through three paperbacks that were as scary as advertised. Collected and rewritten for children by folklorist Alvin Schwartz, the volumes of horror stories were the most frequently contested books of the 1990s, according to the American Library Association. (R.L. Stin's Goose Goose Series, by comparison, ranked 15th.) The stories are whimsical, but sometimes terrible - people making sausage out of people, detailed descriptions of corpses and so forth. The accompanying drawings of Stephen Gammell, which are astounding, often nasty, and legitimately disturbing as anything else I've ever seen in children's literature, are the kind of silence in his brain, and probably play a big role in the trilogy's enduring appeal. I can't speak for my entire fourth grade class, but I was most compelled by the way books, being an anthology of folklore rather than a wholesale invention, captured the dark origins of horror stories. Not horror writing per se, but the kinds of accounts people are talking about campfires, or on the night, my friend's cousin swears it's happened to him sort of. It's a feeling it's probably not real, but maybe just maybe it is. Some of these tales are very old, and they are told all over the world, Schwartz wrote in his opening statement. They are based on things that people have seen or heard or experienced, or thought they have done. Cobbling these tales into a comprehensive narrative should be challenging, and producer Guillermo del Toro and director Andre Esbal did the job. The skeleton of the film is: it's 1968. Three friends named Stella, Auggie and Chuck (played by Zoe Margaret Colletti, Gabrielle Rush and Austin Sadour, respectively) are on the run after with the city's bully. Older teenager Ramon (Michael Garza) helps them, and then they invite him to the haunted house. It is alleged that the Bellows family, who once owned it, kept their daughter Sarah in a prison in the basement where she was being held for hours, writing stories. Legend has it that if she tells you one, it will be the last time you hear. Stella, an aspiring horror writer, discovers Sarah's book and steals it from home, catalysing the act of stupidity that every scary movie needs. Every night in the book there is a new fable, in which the main character features one of the residents of the city, who is doomed to play the plot in real life. They are taken from horror stories, although some have been tweaked, or seem to mash up more than one entry. Some of them are well translated into the big screen. Horror Red Spot - in which a girl gets a bug bite on her face that turns out to be an egg bag full of spiders-intensifies when you can see spiders exploding out of her skin. Other storylines seem to be included just to provoke Hey, I remember that Reaction from book lovers. There's a very faithful re-creation of a creature in one famous illustration that was delightful and scary to see, but the end of the scene is anticlimactic and more bizarre than anything. This vignette-centric approach is perhaps the only way to turn a collection of one- or two-page tales into a feature film, but it also makes the film feel disjointed. Another remarkable attempt that doesn't quite land is an effort to connect the terrifying search for children with the 1968 political climate. The spectre of the Vietnam War haunts the film, and some of the fantastic elements effectively remind viewers of this. One character whose older brother came home to pieces after a fight was later caught by a dismembered corpse that could assemble itself. But it's less clear what the film is trying to achieve by setting much of the action on Richard Nixon's 1968 Election Night-repeated close-up coverage of the election on TV doesn't seem to connect meaningfully to the horror children experience. The filmmakers of Scary Stories are clearly fans of the series, and do it justice in many ways. They remarkably reproduced the aesthetics of the original illustrations and dropped several, more subtle references to the discerning fan. (One of Stella's tales of a boy whose beloved dog turns out to be a sewer rat, it's taken from horror stories 3. And Sarah Bellows's favorite song is a folk number reissued in a book that starts with lyrics Don't You Never Laugh As a Hearse Passes / Because You Can Be Near to Die, and continues to describe your decaying bodies: Worms/scans crawl out.) Maybe young viewers will imprint on the film just like I and many others have done with the books, but for some reason I doubt it. The power of the horror stories that the film wants so badly in the way they make you see the potential for danger where you are not before. Psycho Psycho generations of people's relationships with their souls. When a stranger calls made them afraid of a phone call from home. Scary stories are an entertaining way to scare yourself off for an hour and a half, but having heavy hands philosophize about the power of stories doesn't make it particularly intriguing. There is a tale from the first volume of horror book stories that have haunted me ever since I read it over 20 years ago. It's called High Beams and it's about a girl driving home late at night who is accompanied by a truck that keeps flashing it bright. When she returns home and runs to call the police, suggesting malintent by her pursuer, the truck driver stops her. He shows a man in the back seat with a knife. He says he followed up to keep her safe, and every time the man in the back seat made a move, the driver turned on his bright to get him back underground. To this day, I get cold if someone shines their bright behind me on the road. The best scary stories do this -- they get under your skin and show up over and over again. (Worms crawl, worms crawl out.) The scary stories of the film just bounce right away. the true story of the three little pigs book pdf
